

Science and Technology

In the Science & Technology Area of Learning and Experience (AoLE), we recognise that although each discipline has its own discrete body of knowledge, together they provide learners with opportunities to develop similar skills and techniques.

At Porthcawl Primary, we want our learners to be excited and inspired to want to find out more, developing their curiosity and inquisitive nature. We want them to be 'experts' with the language of the AoLE, able to ask questions, plan approaches and make informed judgements.

Across the Science & Technology disciplines, learners will have opportunities to explore through hands on, practical experiences with strong links to local expertise. They will develop their skills, gaining experience and knowledge that will enable them to and solve problems to meet everchanging needs and wants of society, relevant to their lives in Porthcawl, Bridgend, Wales or the wider world.
